OUR SERVICES

Each patient's care is approached from every angle of our collective expertise to determine the ideal nonoperative or operative treatment. The best minds in spine and pain are working together to focus on each patient and provide exceptional care and superior service.

Physiatry or Physical Medicine & Rehabilitation

Physiatrists specialize in a wide variety of conservative treatments for the musculoskeletal system. The goal is to restore strength, range of motion, and physical self-sufficiency without surgical intervention. Treatments provided at Nebraska Spine + Pain Center may include injection, medication, active physical therapy (exercises), passive physical therapy (modalities), work conditioning, and assistive devices (braces).

Interventional Pain Care

Interventional pain physicians use effective, evidence-based protocols to treat pain with fluoroscopically guided injections. At NSPC, exciting new advancements in pain management are changing lives and lessening the usage of narcotic medication. Our interventional pain providers collaborate as a team with other physicians to diagnose and treat various forms of pain caused from aging, sports, accidents, or work-related injuries.

Imaging

MRI, CT, X-ray, and fluoroscopy services are offered on-site for a timely and more complete diagnosis.

Physical Therapy

Nebraska Spine + Pain Center physical therapists have undergone unique training to provide highly specialized restorative movement therapy for the back and neck. They treat conditions and injuries of the spine that may result from the aging process, neurological problems, sports/exercise, work, or motor vehicle accidents. Physical therapy is integral as a part of conservative care and in postsurgical recovery.

Orthopedic Spine Surgery

The surgeons of Nebraska Spine + Pain Center are fellowship-trained in orthopedic spine surgery. They focus exclusively on the spine, and their commitment to surgical excellence is unparalleled in the region. Our surgeons provide a comprehensive array of surgical procedures, from minimally invasive to complex. Visit our website for full descriptions and videos.

Neurological Surgery

Our board-certified neurosurgeon focuses on the spine with specialization in nerve conditions, tumors, and spinal cord abnormalities. We also provide surgery and care for carpal tunnel syndrome. By design, NSPC works more collaboratively between our orthopedic and neurological departments in diagnosis and treatment of the spine than anywhere else in the region.

Braces & Orthotics

Nebraska Spine + Pain Center provides services for custom braces and orthotic devices on-site at our Omaha clinic.
